

art.FP DUST FELTS mod.20/60 series FP200BET/L and series FP400FDS

The **FP200** series Felts are fitted in the **art.CPT Cylinders** and in the **art.BP Dust Cups** positioned on the ends of the mobile supports of the **Tecnology** and **Tecnology Safety with “automatic” control** Groups, and are supplied as spare parts when required.

The **FP400** series Felts are fitted in the **art.FDS/T Safety Flange** positioned at the far ends of the mobile supports of the **Tecnology Safety with “visual” checking,** Groups, and are supplied as spare parts when required.

N.B. To facilitate their replacement a single transversal cut can be made on the new felts from the outer edge to the centre. This makes it easy to fit them whilst the trapezoidal screw is still inserted in the support. As multiple felts are used each felt can be positioned to overlap the cut of the previously inserted felt to ensure that grease does not escape. For more information please contact our technical office.

FP200
